```
int max(int n1, int n2)
{
        if (n1 > n2)
            return n1;
        return n2;
}

float max (float n1, float n2)
{   if (n1 > n2)
        return n1;
    return n2;
}

std::string max (std::string n1, std::string n2)
{
        if (n1 > n2)
            return n1;
        return n2;
}
```

```
max(n1, n2)
{ if(n1> n2)

}
```

```
def max(n1, n2):
    if n1 > n2:
        return n1
    return n2

max([   ], "Hello")
```

```
template <typename T>
function()
{

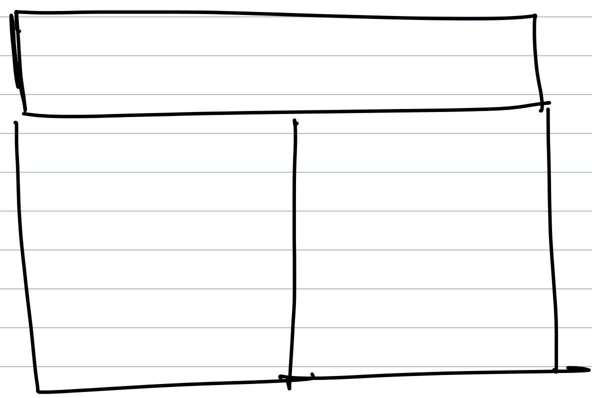
}
```

```
template <typename T>
class
{

};
```

```
template <typename T>
T max (T const& n1, T const& n2)
{
    if (n1 > n2)
        return n1;
    return n2;
}
```

function template.



```
int (*p)[5];

int (*pfn)(int,int);
```

```
template<typename T> T max (T const& n1, T const& n2)
{
  ⋮
}
```

max

```
template<typename T> T max(T const& n1, T const& n2)
```

max is a function template having type parameter T

accepting n1 → const ref. to T
n2 → const ref. to T

returning T
