

```
QObject::connect(&myButton, SIGNAL(clicked()), &app, SLOT(quit()));
```

```
class QPushButton
```

```
{
```

```
    signals:
```

```
        void clicked();
```

```
    public:
```

```
        void raiseClickedEvent()
```

```
        {
```

```
            emit clicked();
```

```
        }
```

```
};
```

```
class QApplication
```

```
{
```

```
    public slots:
```

```
        void quit()
```

```
        {
```

```
            // application termination
```

```
        }
```

```
};
```

```
myButton.raiseClickedEvent(); ->
```

```
QPushButton::raiseClickedEvent(&myButton) | this == &myButton
```

```
-> emit this->clicked() |
```

Because of connect statement (check first line of this note)

```
app.quit()
```

```
BUTTON -> WINDOW -> EVENT QUEUE
```

```
    while(GetMessage())
```

```
    {
```

```
        TranslateMessage();
```

```
        DispatchMessage(); // WndProc() -> myButton.raiseClickedEvent();
```

```
    }
```
